

BLOOD RELATION

Concept Clarity Sheet

Logical Reasoning • Rules + Family-Tree Diagrams + Solved Examples

1. What is Blood Relation Reasoning?

Blood Relation questions test your ability to identify how members of a family are related to one another, based on statements given in words or in coded symbols. There is no fixed numerical formula here — the ‘formula’ is a set of standard relationship rules plus a family tree diagram, which together let you find any relation quickly and accurately.

The golden rule: whenever a question has more than 2–3 relations, STOP reading in your head and START drawing — a simple family tree removes all confusion.

2. The Family Tree — Visual Map of Relations

Every blood relation question can be represented on a family tree. Learn this basic 3-generation structure by heart — almost every question is a small piece of this bigger picture.

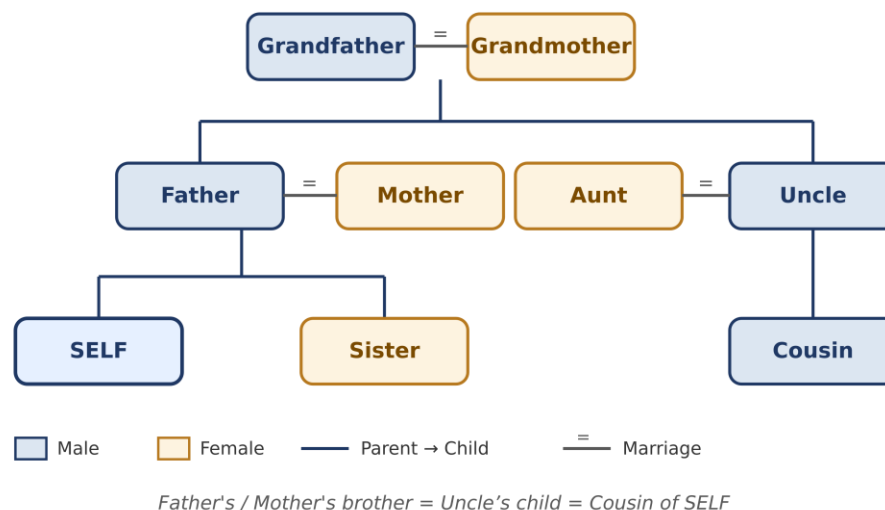

Fig 1: A standard 3-generation family tree — male = blue box, female = gold box, “=” denotes marriage.

3. Basic Relation-Combination Rules

These combinations appear again and again in exams. Memorising this table is the single most useful thing a student can do for this chapter.

Combination	Relation
Father's / Mother's Son	Brother (of the speaker)

Combination	Relation
Father's / Mother's Daughter	Sister
Father's Father	Grandfather
Father's Mother	Grandmother
Mother's Brother	Maternal Uncle
Father's Brother	Paternal Uncle
Mother's / Father's Sister	Aunt
Uncle's / Aunt's Son or Daughter	Cousin
Son's Wife	Daughter-in-law
Daughter's Husband	Son-in-law
Brother's Son	Nephew
Brother's Daughter	Niece
Husband's / Wife's Father	Father-in-law
Husband's / Wife's Mother	Mother-in-law
Husband's / Wife's Sister	Sister-in-law
Husband's / Wife's Brother	Brother-in-law
Father's / Mother's only Son (not self)	Brother
Grandfather's only Son	Father

Example: Pointing to a man, a woman said, “His mother is the only daughter of my mother.” How is the woman related to the man?

Only daughter of the woman's mother = the woman herself.

So, the man's mother = the woman.

Answer: The woman is the man's Mother.

4. Step-by-Step: Solving with a Family Tree

Follow three steps for any wordy question: (1) identify every person mentioned and mark their gender, (2) connect them generation by generation using the tree, (3) read the final relation asked in the question directly off the tree.

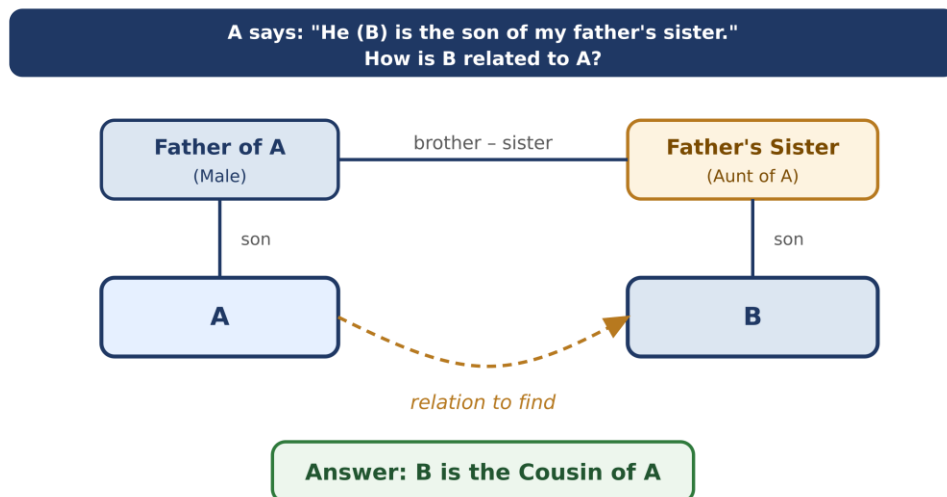

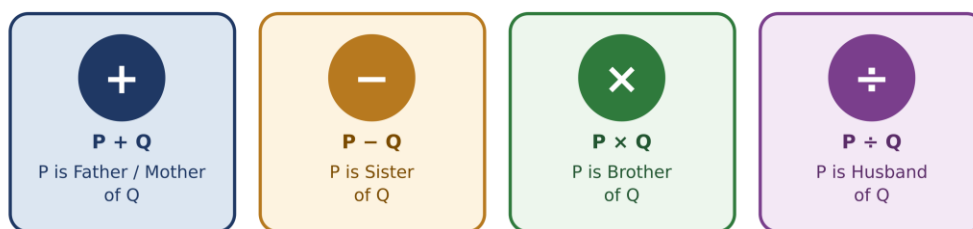

Fig 2: Building the tree turns a confusing sentence into a one-look answer.

5. Coded / Symbol-Based Blood Relations

A tougher variation replaces words with symbols (+, -, ×, ÷, etc.), each representing a specific relation. The question ALWAYS supplies the code/legend — your job is to decode it, then solve exactly as before using a family tree.

Example legend only — the ACTUAL meaning of each symbol is always given in the question.

Step 1: Decode symbols → Step 2: Draw the family tree → Step 3: Read the relation

Fig 3: A sample symbol legend — always read the legend given in your specific question first.

Example: If $P + Q$ means P is the father of Q , and $P \times Q$ means P is the brother of Q , what does ' $A + B \times C$ ' tell us?

$A + B \rightarrow A$ is the father of B

$B \times C \rightarrow B$ is the brother of C

Combining: A is the father of B , and B is C 's brother, so A is also the father of C .

Answer: A is the father of C .

6. Quick Tips & Shortcuts for Exams

- Always draw the tree from the **SPEAKER's** point of view (the person making the statement) unless told otherwise.

-
- Use '+' for male, a small circle/oval or '-' for female next to each box — or simply use two box colours, as in this sheet.
 - Read pronouns carefully: 'his', 'her', 'my' constantly shift the reference person — underline whose statement you are on before drawing the next branch.
 - Phrases like 'only son', 'only daughter', 'no other brother/sister' are crucial — they tell you there is exactly ONE person in that box, removing ambiguity.
 - For coded questions, decode ALL symbols first on a rough side note before touching the family tree.
 - Generation prefixes stack: grandfather's father = great-grandfather; brother's son's son = grand-nephew, and so on.

7. Practice Questions (For Student Assignment)

- Introducing a man, a woman said, "He is the only son of my mother's mother." How is the man related to the woman?
- A is B's sister. C is B's mother. D is C's father. E is D's mother. Then, how is A related to D?
- If $P \div Q$ means P is Q's mother, $P \times Q$ means P is Q's father, and $P + Q$ means P is Q's brother, then in ' $M \times N + O$ ', how is M related to O?
- Pointing to a photograph, a man said, "She is the daughter of my grandfather's only son." How is the girl related to the man?
- A and B are sisters. C and D are brothers. A's daughter is D's sister. How is B related to C?
